Subject: Coney Island Creek Site Inspection (SI) Report

Hello Mr. Bogin,

Today, EPA released the [site inspection \(SI\) report](#) for Coney Island Creek. This report builds on the information gathered by EPA during the [preliminary assessment \(PA\)](#) completed in September 2020 and summarizes data from 50 sediment samples and eight surface water samples.

EPA shared the SI report with the New York State Department of Environmental Conservation, our state partner agency. Once they have had an opportunity to review the information, we will begin discussions about what next steps might be appropriate for the site.

Please note that EPA must first complete our investigative and consultation work before making any determinations on whether we will propose the site for inclusion on our Superfund National Priorities List.

EPA plans to host a virtual community meeting for Community Board 13 sometime in February to discuss the SI report and answer any community questions. If you're not on the Community Board 13 email list and you're interested in participating in the meeting, please let me know, and I will have the calendar invite shared with you when it is available.
